RE: **ATTN: CANNON CUSTOMERS—For Immediate Release**

CANNON announces CCS chiller change

CANNON Instrument Company has updated the specifications for the accessory cooling unit required for operation of all new CANNON Cold-Cranking Simulator models 2050 and 2100.

The new chiller model being shipped from the CANNON factory with CCS orders specifying a chiller is the **Julabo FL300**. Although this model is not identical with the previous model (FE500), all critical performance specifications including cooling and pump capacity, temperature range, and coolant type are fully compatible with operation of the CCS-2050/2100 units.

The **Julabo FL300** is the recommended replacement for the FE500 model of Julabo, which has been discontinued.
