RE: **PRESS RELEASE—For Immediate Release**

CANNON Releases CCS Performance Upgrade Kit

CANNON Instrument Company is pleased to announce the release of a comprehensive performance upgrade for the CCS-2050/2100 instruments. These improvements will be available in the form of an upgrade kit, the "CCS Enhanced Performance Kit." This kit, which can be user-installed, includes detailed installation instructions and all components and specialty tools necessary to complete the installation.

The Upgrade Kit incorporates a variety of instrument design enhancements, including a new high-performance motor, improved speed-sensing encoder, pulley system, and motor mounting bracket. The upgrade improves calibration stability, test accuracy, and speed resolution of the CCS-2050/2100 instruments, enabling them to consistently exceed the precision requirements of ASTM D 5293, while extending the time period before recalibration is necessary.

The upgrade kit will be available in mid-May. For additional information, contact CANNON Instrument Company.
